Skills

Languages: JavaScript (ES6+), TypeScript, SQL, Java

Technologies & Tools: ReactJS, NextJS, Redux Toolkit, Context API, REST APIs, Webpack, NPM, Docker, Jenkins, Git, GitLab

Architecture & Concepts: Micro-Frontend Architecture, Scalable UI Systems, Component Reusability, State Management, Performance Optimization

Testing: Jest, React Testing Library, Familiarity with Karma, Jasmine

Other: JWT Authentication, Responsive Design, Agile/Scrum, API Integration

Work Experience

Acabes International, Kochi

Frontend Developer

Sept 2023 – Present

- Contributed to the design and development of scalable frontend architecture for enterprise banking applications using React.js and modern JavaScript frameworks.
- Implemented micro-frontend architecture to enable modular development and independent deployment of application features across multiple teams.
- Designed and developed reusable UI component libraries, improving development consistency and reducing duplication across modules.
- Managed complex application state using Redux Toolkit and Context API, ensuring efficient handling of asynchronous data flows and API interactions.
- Structured API integration layers for seamless communication with backend services, improving data consistency and application reliability.
- Optimized application performance using lazy loading, code splitting, and efficient rendering strategies, improving responsiveness across high-usage modules.
- Collaborated with cross-functional teams including backend engineers, QA, and business stakeholders to translate requirements into scalable technical solutions.
- Participated in code reviews, debugging, sprint planning, and production issue resolution to maintain high code quality and system stability.
- Guided and mentored a junior React developer, supporting development, code quality, and best practices adoption.

Technologies: React.js, JavaScript, Redux Toolkit, REST APIs, Docker, Jenkins, GitLab

Projects

Europe Arab Bank (EAB) – Enterprise Banking Platform

• **Portal and Muilets:** Contributed to building a scalable financial banking platform and back-office portal using React.js delivered within a 6-month timeline for premium and high-value banking customers. Managed complex API integrations and data-driven UI updates across multiple modules. Implemented modular UI architecture supporting secure financial workflows and enterprise-scale operations. Played a key role in delivering a high-impact solution that enhanced digital banking capabilities and improved operational efficiency for the bank.

Arabi Emart – E-Commerce Platform

• **Portal and Backoffice:** Developed responsive and scalable UI components for a high-performance e-commerce system, handling asynchronous API integrations and optimizing frontend performance for smooth user experience. Used by a huge number of customers in the PLC countries and the middle east.

Helios – Financial Application:

- **Portal and Backoffice:** Designed and developed reusable frontend components and contributed to scalable UI architecture enabling secure, high-performance financial workflows across multiple modules, as part of a large-scale transformation initiative modernizing the bank's core financial systems.

Reflect – Enterprise Financial System:

- **Portal and muilet:** Developed scalable, user-centric interfaces with a focus on performance, responsiveness, and maintainability, while integrating REST APIs and managing complex data-driven UI workflows across modules. The application is live on the Play Store and App Store with 1M+ downloads and functions as a core fintech platform for Arab Bank.

Education

CEMP,(KTU)

Aug 2019 - Jun 2023

B.Tech. in Computer Science and Engineering

CGPA:8.7/10

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Data Mining, Advance Data Structures and Algorithms, Information Retrieval, Image Processing

Project Work

- **Sign Language Translator (Research Project):** Developed a deep learning-based system using GAN and LSTM for real-time sign language translation and published the research at the ICES-2023 international conference
- **Restaurant Management application:** Designed and developed a full-stack web application using PHP, HTML, CSS, and JavaScript to handle order processing, reservations, and menu management with dynamic data handling.

Awards and Certificates

- **Published Research Paper – ICES 2023:** *Sign Language Translation using GAN and LSTM*
- Advanced React JS Course – Udemy
- Python Specialization – Coursera
